# PROJECT REPORT

## Project Description

I Performed a brief analysis on Instagram users to track how users engage and interact with the site/app in attempt to derive the business insights for marketing, product & development team

These insights will be used by the respective teams to launch new marketing campaign, decide on features to build for the app, track the success of the app by measuring user engagement and improve the experience altogether to help the company grow

***“This Project is performed on the ig\_clone database”***

***In this demo project I’m working with the product team and the project manager had asked me to provide insights on the question asked by the demo team***

---

## TABLE OF CONTENTS:

|   |   |
|---|---|
| PROJECT REPORT .....                      | 2 |

| DATABASE used:ig_clone .....              | 6 |
| Sql query used to perform analysis: ..... | 6 |

---

# APPROACH

I started off with learning the concepts required for the projects and did the requirement analysis first then I looked into the database that what data do I have then accordingly I planned which table will be suitable for which question and then went through all the details of the question and planned which tables are to be joined in the process. I took a look into the schema and saw various answers were not directly available and then I had to create a formula for those particular requirements. my approach was simple, look the question perform the requirement analysis and then perform the analysis for that question and provide the insights.

---

## TECH-STACK USED:

- For SQL I'm using MYSQL workbench 8.0
- For graphs I'm using Microsoft office excel spreadsheets (MS office 2019)
- For making report I'm using Microsoft office word (MS office 2019)

---

# SQL QUERY along with insights:

## DATABASE used:ig\_clone

- To find the most loyal users :

Sql query used to perform analysis:

```
select * from users  
order by created_at  
limit 5;
```

here we selected those users who were the oldest on the platform in terms of usage and to find that we extracted the dates on which their accounts were created

| id | username         | created_at       |
|----|------------------|------------------|
| 80 | Darby_Herzog     | 06-05-2016 00:14 |
| 67 | Emilio_Bernier52 | 06-05-2016 13:04 |
| 63 | Elenor88         | 08-05-2016 01:30 |
| 95 | Nicole71         | 09-05-2016 17:30 |

Insight:We got the 5 most loyal users by running the above query

- Remind Inactive Users to Start Posting:

Sql query used to perform analysis:

```
/*to find users who have never posted*/  
select username from users  
left join photos on users.id=photos.user_id  
where photos.id is null;
```

here we selected all the users from the users table by joining it to the photos table using id in the user table as user\_id in the photos table and then extracted the user names of such users for whom the photo id was null

---

| sl.no | username            |
|-------|---------------------|
| 1     | Aniya_Hackett       |
| 2     | Kassandra_Homenick  |
| 3     | Jaclyn81            |
| 4     | Rocio33             |
| 5     | Maxwell.Halvorson   |
| 6     | Tierra.Trantow      |
| 7     | Pearl7              |
| 8     | Ollie_Ledner37      |
| 9     | Mckenna17           |
| 10    | David.Osinski47     |
| 11    | Morgan.Kassulke     |
| 12    | Linnea59            |
| 13    | Duane60             |
| 14    | Julien_Schmidt      |
| 15    | Mike.Auer39         |
| 16    | Franco_Keebler64    |
| 17    | Nia_Haag            |
| 18    | Hulda.Macejkovic    |
| 19    | Leslie67            |
| 20    | Janelle.Nikolaus81  |
| 21    | Darby_Herzog        |
| 22    | Esther.Zulauf61     |
| 23    | Bartholome.Bernhard |
| 24    | Jessyca_West        |
| 25    | Esmeralda.Mraz57    |
| 26    | Bethany20           |

**Insight: we got to know that 26 users were inactive and have not posted a single photo also we got their user\_name so now we can send them a mail to remind them to upload a photo.**

- Declaring the contest winner:

Sql query used to perform analysis:

**/\*declaring the contest winner\*/**

**select**

**users.username, photos.id,photos.image\_url,count(\*) as total\_likes**

**from likes**

**join photos on photos.id=likes.photo\_id**

**join users on users.id=likes.photo\_id**

**group by photos.id**

**order by total\_likes desc**

**limit 10;**

here we combined three tables in the database to get the photo with most likes ,I used the count function on each image url and named the column as totallikes then ordered the images on the basis of toal\_likes, after running this query we extracted the top 10 photos on the basis of total likes

| username       | id  | image_url             | total_likes_on_phot |
|----------------|-----|-----------------------|---------------------|
| Kaley9         | 30  | http://kenny.com      | 41                  |
| Jayson65       | 61  | https://dejon.name    | 41                  |
| Zack_Kemmer9   | 52  | https://hershel.com   | 41                  |
| Tomas.Beatty9  | 97  | https://carolanne.com | 40                  |
| Alexandro35    | 13  | https://fred.com      | 40                  |
| Javonte83      | 100 | https://brook.com     | 39                  |
| essie_Stanton4 | 62  | https://rigoberto.net | 39                  |
| Seth46         | 44  | http://golden.org     | 39                  |
| Mike.Auer39    | 66  | http://lionel.net     | 39                  |
| Harley_Lind18  | 3   | http://vicky.biz      | 38                  |

from the above table we get to know that the photo with id 30 of the user kaley9 has the most likes and she should be awarded as the winner

- **Hashtag Researching:**  
**Sql query used to perform analysis:**

```
SELECT  
    tags.tag_name,  
    COUNT(*) AS total  
FROM photo_tags  
    JOIN tags  
    ON photo_tags.tag_id= tags.id  
GROUP BY tags.id  
ORDER BY total DESC  
Limit 5;
```

Here we joined the tables photo\_tags and tags and extracted the tagnames and counted them on the photos used and named the column as total then we grouped the data on the basis of tags and got the top 5 hashtags used

| tag_name | total |
|----------|-------|
| smile    | 59    |
| beach    | 42    |
| party    | 39    |
| fun      | 38    |

**Insight:**These are the top 5 hash tags that people use on their Instagram post and by using these tags the companies can reach more people

- Launch AD Campaign:  
Sql query used to perform analysis:  
**/\*users joined on the day\*/**  
**SELECT**  
**DAYNAME(created\_at) AS day,**  
**count(\*) as total**  
**FROM users**  
**GROUP BY day**  
**ORDER BY total DESC**  
**LIMIT 3;**

Here we used the users table in the database and used the dayname() function by taking the created at as the parameter for the dayname() function and used the count function by grouping the data on the basis of dayname

| day      | total |
|----------|-------|
| Thursday | 16    |
| Sunday   | 16    |
| Friday   | 15    |

Insight:The results came as out of the 100 users most people joined Instagram on thursdays

And Sundays(16 people each day) this means to launch an ad campaign these are the best suited days

---

- **User Engagement:**

**Sql query used to perform analysis:**

**/\*to find average post per user per day\*/**

**SELECT**

**(SELECT COUNT(\*) FROM photos) / (SELECT COUNT(\*) FROM users) AS  
average;**

**Here we divided the total number of photos by the total number of users which gave us the average post per user**

**Insight:The result came out to be 2.57 post per user**

---

- **Bots & Fake Accounts:**

**Sql query used to perform analysis:**

**/\*to identify the bot account\*/**

```
SELECT  
    photos.user_id,  
    COUNT(photos.user_id) AS users_in_photos,  
    COUNT(likes.user_id) AS users_in_likes,  
    users.username  
FROM  
    photos  
    INNER JOIN  
    likes ON photos.user_id = likes.user_id  
    JOIN  
    users ON photos.user_id = users.id  
GROUP BY photos.user_id;
```

**Here we joined likes ,photos and user table and got the user id and user name of those users who have liked all the photos as it is not possible for a human to like all the photos**

**Insight:we found that 64 users in this dataset were bots**

| user_id | users_in_photos | users_in_likes | username              |
|---------|-----------------|----------------|-----------------------|
| 2       | 376             | 376            | Andre_Purdy85         |
| 3       | 316             | 316            | Harley_Lind18         |
| 4       | 279             | 279            | Arely_Bogan63         |
| 6       | 410             | 410            | Travon.Waters         |
| 8       | 316             | 316            | Tabitha_Schamberger11 |
| 9       | 340             | 340            | Gus93                 |
| 10      | 261             | 261            | Presley_McClure       |
| 11      | 445             | 445            | Justina.Gaylord27     |

---

# Results:

In this project I learned the basic functions in SQL and how to think analytically and what steps to follow while performing an analysis this project taught me new ways to approach the problem especially the last question was a bit tricky and hard to think off but after a few hours of brainstorming I got to how to extract that data I have noted the insights that i got while I was performing the analysis and I have mentioned it after every query that I performed.
